Trumpet International provide Open Source Web solutions.

We at Trumpet International provide solutions not only for the Internet, but also for Local Area Networks (Intranet). The solutions can range from simple websites, to complex database driven systems. To further extend these capabilities, we specialize in developing spatial solutions based on UNM MapServer, MapGuide and general WMS services such as GeoServer and OpenLayers.

With the full support of the global OSGEO Community and also local skills, we are committed in providing solutions that not only meet the user's requirements, but are on level with international trends. We understand the importance for data, and for that we want to make sure that our clients will have the necessary systems to manage that. By developing Web Driven database systems, we can ensure that geographical limitations do not necessary limit the functioning of the business.

Thinking Web solutions? Think Trumpet International!
